EDUCATION

Stony Brook University | *BS Computer Science and Applied Math/ Statistics*

Expected Graduation **May 2027**

- Cumulative GPA: **3.82/4.0**
- Relevant Coursework: Operating Systems, System Fundamentals, OOD, Networks, Data Structures and Algorithms, Linear Algebra, Probability Theory, Database Systems, Graph, Analysis of Algorithms, Discrete Maths, Data Analysis, Calc(I-III)

EXPERIENCE

OuterLabs Studio | *Lead Solutions Architect*

Brooklyn, NY | Aug 2023 - Jun 2025

- Expanded client portfolio by 30% through strategic acquisition plans, securing high-value accounts and fostering long-term partnerships, delivering 15+ projects under tight deadlines, ensuring optimal quality and client satisfaction.
- Designed and built scalable front-end architectures using React, Next.js, and TypeScript, alongside robust backend solutions with Node.js and PostgreSQL, optimizing performance and reducing API response times.
- Architected and maintained on-premise and AWS Cloud server infrastructure for 15,000+ users, integrating CI/CD pipelines with GitHub Actions to streamline deployments and enhance system reliability.
- Contributed to OuterLabs' success, earning three industry awards and generating six-figure profits within the first year.

Sai AI | *Machine Learning Intern*

Ithaca, NY | Aug 2024 - Dec 2024

- Assisted in fine-tuning 3 B-parameter open-source language models (Hugging Face Transformers & PyTorch Lightning), reducing validation perplexity 9 % versus the base model.
- Containerized and deployed a FastAPI inference service to AWS ECS with Docker, achieving <500 ms median latency at 10 QPS.
- Logged metrics with Weights & Biases, enabling the team to track 25 + training runs and compare model performance.

Amazon | *Junior Developer*

Manhattan, NY | Oct 2021 - Oct 2024

- Designed and implemented a scalable billing system processing 10M+ transactions monthly, reducing error rates by 35%, and optimizing RESTful payment execution APIs to decrease latency for advertisers.
- Spearheaded the migration of legacy billing systems to a microservices architecture on AWS (ECS, S3, DynamoDB), improving maintainability and reducing downtime by 45%.
- Enhanced API reliability by designing and executing 150+ unit and integration tests using JUnit, Mockito, and Pytest, improving test coverage by 35%.
- Collaborated with cross-functional teams of 12 developers and performed 30+ code reviews to ensure adherence to best practices and maintain high code quality.

TECHNICAL PROJECTS

Fitness Tracker | *React, Firebase, MUI, Framer Motion* | [Github](#)

- Built a responsive fitness-tracking web application enabling users to log workouts & meals, fetch nutrition data from the USDA FoodData API to autofill nutrition facts, and receive AI-driven workout recommendations.
- Implemented Firebase Authentication & Firestore for secure sign-up, login, and real-time data storage; enabled seamless cross-device sync; integrated dark-mode theming and Framer Motion animations.

Online Stock Trading System | *Java, JavaScript, JDBC, MySQL* | [Github](#)

- Designed and implemented a relational database for an online stock trading platform using MySQL, ensuring data integrity, indexing, and optimized queries while enforcing role-based access control for customers, brokers, and managers.
- Developed a dynamic JavaScript/HTML trading dashboard atop ACID-compliant stored procedures; added optimistic concurrency control and repeatable-read isolation to process 100 + simultaneous orders without race conditions.

Sockets Battleship Server | *C, C Sockets API, Valgrind* | [Github](#)

- Developed a networked Battleship game in C using the Sockets API, enabling real-time gameplay between two clients connected to a centralized server.
- Optimized data structures with dynamic memory management, preventing memory leaks (verified with Valgrind), and integrated an automated test suite with an interactive CLI for server administration and real-time game monitoring.

SKILLS

Languages: Java, Python, C/C++, JavaScript/ TypeScript, SQL

Frameworks / Tools: React, Next.js, Node.js, Express, Redux Toolkit, JUnit, PyTorch, AWS, GitHub, Jira, Linux

Skills: Agile Development, CI/CD, SCRUM, Microservice, Back-end, Object-Oriented Programming, Unit Testing, Integration Testing
